

Documents Reveal Extensive NSA Targeting of WikiLeaks

Washington, February 19 (RHC)-- A new report based on top-secret documents from Edward Snowden has revealed how the United States and Britain targeted the whistleblowing website WikiLeaks after it published documents on the U.S.-led war in Afghanistan.

According to a report co-authored by Glenn Greenwald and published by The Intercept, Britain's top spy agency secretly monitored visitors to a WikiLeaks site by collecting their IP addresses in real time.

Meanwhile, the National Security Agency added WikiLeaks' founder Julian Assange to a "manhunting" target list alongside al-Qaeda suspects. The leaked documents also show the United States urged its allies to file criminal charges against Assange over the Afghan War Logs.
