

Powerful 6.8 Magnitude Earthquake Strikes off Panama

Panama City, May 13 (RHC) – A powerful earthquake struck in the Pacific Ocean off the coast of Panama early on Tuesday, shaking buildings, but there were no initial reports of major damage or casualties.

The quake of 6.8 magnitude hit about 130 km (81 miles) south of the western city of David in Chiriqui province at a depth of 10 km, the U.S. Geological Survey reported.

An official from Panama's emergency services said goods had fallen off shelves in parts of Chiriqui but was no serious damage or casualties in the area.

No risk of tsunami was seen, the official said, but added that authorities were continuing to monitor the region.
