

Syrian air defenses intercept Israeli missiles from occupied Golan Heights

The Syrian Army's air defenses have intercepted Israeli air-to-surface and surface-to-surface missiles

Damascus, February 4 (RHC)-- The Syrian Army's air defenses have intercepted Israeli air-to-surface and surface-to-surface missiles coming from the direction of the Israeli-occupied Golan Heights, state media say.

"At 10:42 p.m., the Israeli enemy perpetrated an air aggression from the direction of the occupied Syrian Golan Heights with air-to-surface and surface-to-surface missiles against some targets in the southern region," the official Syrian Arab News Agency quoted a military source as saying on Wednesday night.

The interceptions were carried out over the country's southwestern province of Quneitra, the report added. Video footage from the attack also showed at least one successful interception of an incoming missile.

The unnamed official said the attack caused only material damage, and the Army's air defenses successfully intercepted most of the missiles. According to the Associated Press, residents in the capital Damascus reported hearing the sound of explosions, which according to state media were those of the Syrian air defenses responding to the incoming missiles.

Israel frequently targets military positions inside Syria, especially those of the resistance movement Hezbollah which has played a key role in helping the Syrian army in its fight against foreign-backed terrorists since 2011. The Tel Aviv regime mostly keeps quiet about the attacks on Syrian territories which many view as knee-jerk reaction to the Syrian government's increasing success in confronting terrorism in country.
