

COVID-19 cases surge in Southeast Asia and Africa

Global COVID-19 cases and deaths are on the rise

Geneva, July 15 (RHC)-- Global COVID-19 cases and deaths are on the rise, fueled by chronic outbreaks in Latin America and surging cases in Southeast Asia, Africa and the Middle East.

The World Health Organization is warning of exponential increases in infections in Libya, Iran, Iraq — and in Tunisia, where medical workers report they've run out of oxygen and beds for coronavirus patients.

Indonesia continues to set daily records for infections, deaths and hospitalizations, and has overtaken India as the region's biggest COVID hot spot. Malaysia has logged a third straight day of record

infections.
