The United Nations is warning Madagascar is on the precipice of the world's first "climate change famine," with about 30,000 people experiencing the highest level of food insecurity recognized by the United Nations??

United Nations, August 27 (RHC)-- The United Nations is warning Madagascar is on the precipice of the world's first "climate change famine," with about 30,000 people experiencing the highest level of food insecurity recognized by the United Nations.

Severe hunger and famine are being driven by drought, deforestation and desertification that's left over 1.1 million of Madagascar's residents in need of humanitarian assistance.

A World Food Program official called the situation unprecedented, adding: "These people have done nothing to contribute to climate change. They don't burn fossil fuels ... and yet they are bearing the brunt of climate change."
