

U.S. Troops in Iraqi Capital to Fly Apache Helicopters

Washington, July 2 (RHC)-- U.S. troops sent to Iraq are to fly Apache attack helicopters and use unarmed surveillance drones in Baghdad, Pentagon officials said on Tuesday. A senior military official, speaking on condition of anonymity, told AFP that the drones were not Reapers or Predators but they are smaller Shadow robotic aircraft launched from a catapult.

The Shadow aircraft, U.S. forces have used in Iraq and in Afghanistan in the past, are about 14 feet (4 meters) long and can fly up to 8,000 feet (2,400 meters) above the ground level.

Pentagon press secretary Rear Admiral John Kirby told a news conference on Tuesday that U.S. troops would "help provide extra security for our facilities, our people, our property, and to also allow - to help allow the State Department and the embassy to continue to function as it is."

Kirby added that the troops will work to safeguard access to the Baghdad airport and the U.S. embassy, adding the embassy remains "open." He went on to say that the situation "continues to be very dangerous" and "the threat continues to be very real."

The United States says it has so far sent 500 troops to Baghdad to increase security for its embassy there. On Monday, President Barack Obama also ordered 200 more troops to Baghdad to protect American diplomats as well as other personnel working in the city.
