

Honduran authorities declare maximum alert due to Tropical Storm Julia

Image not found or type unknown

Tegucigalpa, October 9 (RHC)-- The Government of Honduras decreed this Sunday the Red Alert, maximum in its risk scale, before the eventual onslaught of Tropical Storm Julia.

"The Secretariat of State in the Offices of Risk Management and National Contingencies [Copeco] raises to Red Alert to 10 departments of the country (...), which includes Lempira, Santa Barbara, Copán, Ocotepeque, Intibucá, La Paz, Cortés, Choluteca, Valle and El Paraíso", informed the referred entity in a

bulletin.

Copeco maintains in Yellow Alert (second in danger level) the rest of the country, and warned about thunderstorms, rains and swells in the coast of the Caribbean Sea as well as in the Gulf of Fonseca.

The weather is particularly hostile in the northern department of Cortes, which has been mobilized for several weeks by the inclement downpours associated with the "Central American winter", as they call the rainy season in the region.

Previously, the Nicaraguan Institute of Territorial Studies (Ineter) declared that Hurricane Julia was downgraded to a tropical storm after entering Nicaraguan territory. "Julia was downgraded to the category of tropical storm, presents maximum sustained winds of 110 kilometers per hour [decreased by 10 km/h], with a translation speed of 24 km/h [decreased by 2 km/h] heading west; it is advancing over national territory and its center is currently located approximately 105 kilometers northeast of Managua."
