The coordinated forces of the sectors that work to put out the fire in the Cuban province of Holguín remain active and advance, so a better scenario is observed to extinguish the fire definitively.

Havana, March 2 (RHC)-- The coordinated forces of the sectors that work to put out the fire in the Cuban province of Holguín remain active and advance, so a better scenario is observed to extinguish the fire definitively.

The advance could be verified in the areas of Casimba, Cuchufli and Pinarito. Likewise, they work to minimize hot areas near Piloto, a site where the Loma del Diablo fires influence.

In Pinarito, more than 16 kilometers of trail were closed and the area is in the process of safeguarding, as part of the control actions, according to Lieutenant Colonel Juan Carlos Calderón Torres, head of the

Ranger Corps in Holguín.

From the advanced post to direct the operations in Santiago de Cuba, located in Alto La Estrella, it transcends that there is confrontation work on the San Luis front and they are maintaining strong combat in the vicinity of the place known as El Ocho in the municipality of Mella , specifically in field 4. The damage to date, only in forest areas, reaches just over 3600 hectares. (Source: Cubadebate).
