

Activists disrupt work at UK factories building F-35 parts used by Israel

Image not found or type unknown

London, December 8 (RHC)-- Four British arms factories supplying components for the F-35 stealth fighter jets used by Israel to bomb Gaza have been temporarily shut down by hundreds of workers and

demonstrators protesting against the Israeli genocide in Gaza. Footage posted online on Thursday showed activists blocking the entrances into the factories.

The factories are: Eaton Mission Systems in Bournemouth, BAE Systems at Samlesbury Aerodrome in Lancashire, L3Harris factory in Brighton, and the BAE Systems Govan site in Glasgow.

L3-Harris' systems are integral to several U.S. combat aircraft including the F-22, F/A-18 and F-35. It also manufactures bomb-release mechanisms for the F-35 combat aircraft and Reaper drone, both of which are deployed by Israel in Gaza.

A trade unionist from the group Workers for a Free Palestine, which helped organize Thursday's action, said it was a necessary step to support the Palestinians trapped in Gaza. "The fighter jets these factories help to produce are being used to imprison the people of Gaza in a death trap. They are ordered to evacuate when they have nowhere safe to go, while our government still refuses to back a ceasefire," said a trade union worker.

"Workers all over Britain are rising up for Palestine, saying we will not allow arms used in a genocide to be supplied in our name and funded by our taxes."

The F-35 is built by Lockheed Martin in the United States, with the help of international partners, including British factories, which supply the components.
