

Explosions in Iranian skies due to activation of air defenses

Image not found or type unknown

Tehran, April 19 (RHC)-- Explosions have been heard near the central Iranian city of Isfahan due to the activation of air defenses, informed sources say.

Initial reports say important facilities in the Isfahan province, especially nuclear facilities, are completely safe and no accidents have been reported.

Following the activation of air defenses in some parts of the country to deal with possible targets, no large-scale hit and explosion caused by any air threat has been reported.
