

Noam Chomsky leaves hospital after suffering stroke

São Paulo, June 21 (RHC)-- The world-renowned linguist and political activist Noam Chomsky was discharged from a São Paulo hospital in Brazil, as he continues to recover from a stroke last year that impacted his ability to speak.

His wife Valeria recently told a newspaper in Brazil that the 95-year-old Chomsky still follows the news and raises his left arm with a clenched fist in anger when he sees images of Israel's war on Gaza.

False reports that Chomsky had died went viral online on Tuesday. But rumors of Noam Chomsky's death were greatly exaggerated. Valeria said that Noam is very much alive and is slowly recovering.
