

Radioactive Drone Lands on Roof of Japanese Prime Minister's Office

Tokyo, April 23 (RHC)-- Authorities in Japan are investigating the appearance of a drone containing possible radioactive material on the roof of Prime Minister Shinzo Abe's office. Radioactive cesium was detected in the area after the drone was found carrying a bottle of liquid bearing the symbol for radioactivity.

The drone's discovery came as a Japanese court approved the restart of a nuclear power station as part of Prime Minister Abe's push to return to nuclear power following the Fukushima meltdown in 2011.
