

Cuba Presents Neurological Rehabilitation Achievements at World Forum

Havana, March 12 (RHC)-- The Cuban achievements in the field of neurological rehabilitation will be presented at the NeuroRehabana 2014 International Congress, which opens Wednesday in Havana.

The general secretary of the forum's organizing committee, Pedro Luis Pazo, told reporters that the event will promote educational strategies on biological, psychological and social considerations in relation to environment, aging and disabilities.

Over 250 representatives from countries such as Argentina, Chile, Mexico, Spain, Britain, the United States and Cuba are attending the forum at Havana's International Convention Center.

The forum's agenda also includes the social and economic impact by the administration of ozone-based therapy on people suffering from neurological conditions and under aging processes.
