

Second-strongest storm to hit North Atlantic lashes United Kingdom

London, February 18 (RHC)-- The second-strongest non-tropical storm ever recorded in the North Atlantic Ocean is wreaking havoc in towns across the United Kingdom. British authorities have issued over 300 warnings as “bomb cyclone” Dennis has produced 80-foot waves and winds reaching up to 90 miles per hour.

The record rains and flooding disrupted air and train travel and killed at least two people. Amid the catastrophic weather event, the British Environment Agency will reportedly announce homeowners should no longer expect to be protected from major floods because they will be seen as inevitable due to the worsening climate crisis.
