

Low-skilled men suffer highest COVID-19 fatalities in England and Wales

London, May 12 (RHC)-- Men in the lowest-skilled jobs had the highest rate of death involving COVID-19 among working-age people in England and Wales, according to data, which also showed deaths among nurses and doctors was no higher than the average.

The data was published after Prime Minister Boris Johnson said that manufacturing and construction workers should be encouraged to go back to their jobs, drawing concern from trade union groups.

Men in the lowest-skilled jobs suffered 21.4 COVID-related deaths per 100,000 males in the period up to April 20, more than double the average for working age males of just under 10 deaths per 100,000, the Office for National Statistics said. The average death rate for working age women was 5.2 per 100,000.
