

British research supports use of face masks to slow COVID-19

London, June 12 (RHC)-- A new study by British researchers finds population-wide mask use could help push coronavirus transmission rates down to controllable levels.

Cambridge University researcher and report co-author Richard Stutt said: "Our analyses support the immediate and universal adoption of face masks by the public."

A former British government adviser said Wednesday the U.K. could have halved its number of coronavirus deaths if the government had imposed its lockdown just one week earlier.
