

Brazil's COVID-19 death toll hits 100,000

Brasilia, August 10 (RHC)-- Brazil's coronavirus deaths have surpassed 100,000 deaths five months after the first reported case in a sign that the country has not contained the deadly disease.

The nation of 210 million people has been reporting an average of more than 1,000 daily deaths from the pandemic since late May and reported 905 for the latest 24-hour period.

The Health Ministry said there had been a total of 3,012,412 confirmed infections with the new coronavirus - death and infection tolls second only to the United States. And as in many nations, experts believe that both numbers are severe undercounts due to insufficient testing.
