Havana, July 29 (RHC)-- Cuban Foreign Minister Bruno Rodríguez denounced the use of the Clubhouse mobile application, downloadable through the Apple store, to organize counterrevolutionary sectors in destabilization plans on the island.

According to the Foreign Affairs Minister, groups contrary to the island's government receive instructions from the United States through this application. The minister pointed out how difficult it is to use any of Apple's applications from Cuba.

Rodríguez reminded the White House that it should not forget the assault on the Capitol last January 6, an attack organized by cyber troops from the deep web, in an attempt to derail Joe Biden's inauguration.

Clubhouse, a social network of audio chat and a wide variety of virtual groups and rooms, was recently involved in a scandal that uncovered the leak of more than 3 billion phone numbers.
