Forensic teams recover human remains at Gaza's al-Shifa Hospital after Israel's field execution

Gaza City, April 9 (RHC)-- More decomposed bodies have been found inside al-Shifa Hospital in Gaza, amid operations to recover bodies of the victims of one of the largest massacres committed by Israel against the Palestinians, Euro-Med Human Rights Monitor says.

The founder and chairman of the group Ramy Abdu said in a series of social media posts that “operations to discover bodies executed by the Israeli army at al-Shifa Hospital continue.” He published a “shocking” video that showed rescue teams, civil defense, and forensic evidence finding more decomposed bodies. A total of 409 bodies have been found so far.

“It seems we are witnessing one of the largest massacres committed by Israel against the Palestinian people in history.” Abdu said the video confirmed the Geneva-based rights group’s report on field execution operations carried out by the Israeli forces during their recent attack on al-Shifa.

“Horror: Doctors, nurses, displaced persons, administrators at the hospital, children, women. This is what is revealed after the Israeli army's withdrawal from al-Shifa Hospital. Dozens of bodies were executed in the field,” he said. According to his remarks, the Israeli army placed the bodies inside pits it had dug.

On March 18th, Israeli forces started a new wave of attacks on Gaza’s main hospital, al-Shifa, and imposed a two-week siege on it.

On April 1st, the Gaza Health Ministry said Israeli forces withdrew tanks and vehicles from al-Shifa , adding that dozens of bodies, some of them decomposed, had been found at the complex after the Israeli pullout, which also left behind a vast swath of destruction. Israel first raided the hospital in Gaza City last November.

Al-Shifa, Gaza’s largest hospital, has sheltered thousands of Palestinians who fled Israel’s invasion in the northern parts of the territory. The Israeli military claimed that the Palestinian resistance movement Hamas is using the facility to “conduct and promote terrorist activity.” Hamas has repeatedly denied operating from Shifa and other health facilities.

The chief of the World Health Organization (WHO) has said al-Shifa is no longer functional because of months of Israeli siege and attacks on the facility.

Israel launched the war on Gaza on October 7 after the Palestinian resistance movement Hamas waged the surprise Operation Al-Aqsa Storm against the occupying entity in response to the Israeli regime’s intensified violence against Palestinians.

Since the start of the offensive, the Tel Aviv regime has killed 33,207 Palestinians and injured nearly 75,933 others.
