

Google to build seven nuclear reactors to power artificial intelligence systems

Image not found or type unknown

New York, October 17 (RHC)-- Google has announced plans to build seven nuclear reactors in the United States to help power the company's data centers and artificial intelligence systems.

The announcement comes just a month after Microsoft said it would fund the reopening of the Three Mile Island nuclear plant, the site of the worst nuclear disaster in U.S. history.

Google is U.S.-based multinational corporation and technology company focusing on online advertising, search engine technology, cloud computing, computer software, quantum computing, e-commerce, consumer electronics, and artificial intelligence. It has been referred to as "the most powerful company in the world" and is one of the world's most valuable brands due to its market dominance, data collection, and technological advantages in the field of AI. Google's parent company, Alphabet Inc., is one of the five Big Tech companies, along with Amazon, Apple, Meta and Microsoft.
